

Staller Stack — AI Guide Questionnaire

Feature Spec: Interactive lead-qualification & service-routing wizard

Goal: Instead of a static contact form, visitors answer 6–9 short questions. Based on their answers, the tool (a) recommends the right Staller Stack service, (b) shows a mini "playbook" of what the engagement would look like, and (c) captures a qualified lead for your sales team.

Recommended format: **conversational stepper** (one question per screen, progress bar, "Back" allowed), not a long single-page form. 90%+ completion rates vs ~40% for long forms.

1. Flow Overview

```
Step 0: Welcome
Step 1: Who are you? (segment)
Step 2: What's your goal? (intent)
Step 3: Service drill-down (branches by Step 2 answer)
Step 4: Current stage
Step 5: Timeline
Step 6: Budget range
Step 7: Team/company size
Step 8: Contact details
Step 9: AI-generated summary + CTA
```

2. Step-by-Step Questions

Step 1 — Segment

Q: "Which best describes you?"

- 🚀 Startup / founder
- 🏢 SMB / growing business
- 🏛️ Enterprise
- 🔧 IT service provider / MSP
- 🎨 Agency (building for a client)

Used for: tone of recommendation + routes MSPs/agencies toward your "Managed Mode / Multi-Tenant" pitch.

Step 2 — Primary Goal (intent)

Q: "What are you looking to do?" (single select)

- Build something new (product, app, platform)
- Modernize or scale an existing system

- Automate work with AI / agents
 - Improve security or get compliant (SOC 2, ISO, etc.)
 - Get ongoing IT support / managed services
 - Not sure yet — I need guidance
-

Step 3 — Service Drill-Down (branches on Step 2)

If "Build something new":

- What are you building?
 - Website / marketing site → **Web Development**
 - Web application / SaaS product → **Web Development / Software Development**
 - Mobile app (iOS/Android) → **Mobile App Development**
 - Internal business tool → **Software Development**
 - CRM for my sales team → **CRM Custom Software**
 - ERP / finance-inventory-ops system → **ERP Custom Software**

If "Modernize or scale an existing system":

- What needs upgrading?
 - Cloud infrastructure / deployment pipeline → **Cloud & DevOps**
 - Legacy software rewrite → **Software Development**
 - Old ERP/CRM migration → **ERP / CRM Custom Software**
 - Performance & security of existing web app → **Web Development & Maintenance**

If "Automate work with AI / agents":

- What kind of automation?
 - Predictive analytics / forecasting on my data → **AI & ML Solutions**
 - Custom AI agent / chatbot / internal copilot → **AI Agent & Model Training**
 - Workflow automation (approvals, tickets, ops) → **AI Agent & Model Training**
 - Not sure — just know AI could help → route to **Playbook Generator**

If "Improve security or get compliant":

- What's the priority?
 - Penetration testing / vulnerability assessment → **Security & Compliance**
 - SOC 2 / ISO 27001 certification prep → **Security & Compliance**
 - Zero-trust architecture / access management → **Security & Compliance**
 - Just had an incident, need help now → flag as **urgent lead**, route to Security & Compliance + fast-track contact

If "Ongoing IT support / managed services":

- MSP/Enterprise → route to **Multi-Tenant / Managed Mode**
- SMB → route to **Support & Optimization** (your Process step 3)

If "Not sure yet":

- Show 2-3 clarifying examples ("e.g., we get too many support tickets," "our app is slow," "we want an AI chatbot") and let them pick the closest → routes into one of the branches above.
-

Step 4 — Current Stage

Q: "Where are you in this project?"

- Just an idea — need a plan
 - Have requirements, ready to build
 - Existing product/system that needs work
 - Have a dev team, need extra capacity
-

Step 5 — Timeline

Q: "When do you want to get started?"

- ASAP / within 2 weeks
 - Within 1-3 months
 - 3-6 months out
 - Just exploring options
-

Step 6 — Budget Range

Q: "What's your rough budget range?" *(always frame as optional/estimate, reduces drop-off if marked "optional — helps us tailor a proposal")*

- Under \$10K
 - \$10K - \$50K
 - \$50K - \$150K
 - \$150K+
 - Not sure / need guidance
-

Step 7 — Team / Company Size

Q: "How big is your team?"

- Solo / 1-5 people
 - 6-50 people
 - 51-500 people
 - 500+ (Enterprise)
-

Step 8 — Contact Capture

- Name (*required*)
- Work email (*required*)
- Company name (*required*)
- Phone (*optional*)
- "Anything else we should know?" — free text (*optional*)

Step 9 — AI-Generated Summary (the payoff screen)

Show a dynamically generated card, e.g.:

Based on your answers, here's what we'd recommend: **Service:** AI Agent & Model Training **Why:** You want to automate support ticket triage for a 50-person team, ready to start within 3 months. **Suggested first step:** 2-week discovery sprint → agent prototype → pilot with your support team. **Estimated engagement:** 6-10 weeks, mid-range budget tier.

[Talk to Us →] [Download this summary]

This mirrors the existing "Playbook Generator" pattern already on your homepage — so this questionnaire can literally feed that engine.

3. Data to Capture Per Lead (for CRM / sales handoff)

Field	Source
Segment (startup/SMB/enterprise/MSP/agency)	Step 1
Primary goal	Step 2
Recommended service	Step 3 (derived)
Project stage	Step 4
Timeline urgency	Step 5
Budget range	Step 6
Team size	Step 7
Name, email, company, phone	Step 8
Free-text notes	Step 8
Lead score (auto)	Derived — see below

Simple lead scoring logic:

- Timeline "ASAP" + Budget "\$50K+" + Stage "ready to build" = **Hot lead** → auto-notify sales, offer calendar booking immediately
 - Timeline "exploring" + no budget selected = **Nurture lead** → send resource email, no immediate call push
 - Security "urgent/incident" answer = **Hot lead, flag urgent** regardless of other answers
-

4. Sample System Prompt (if powering the summary with an LLM call)

```
You are the Staller Stack AI Guide. Based on structured questionnaire answers, do two things:  
1. Recommend exactly one primary service from this list only:  
  [AI & ML Solutions, AI Agent & Model Training, Mobile App Development,  
  Web Development, Cloud & DevOps, Software Development,  
  ERP Custom Software, CRM Custom Software, Security & Compliance]  
2. Write a 2-3 sentence plain-English summary of what the engagement  
   would look like, in a confident, non-salesy tone.  
  
Never recommend a service outside the list. If answers are ambiguous,  
pick the closest match and say so briefly. Output as JSON:  
{ "service": "...", "why": "...", "first_step": "...", "estimate": "..." }
```

5. UX Notes

- **Progress bar** at top ("Step 3 of 9") — reduces abandonment.
 - **Skip logic:** Steps 4-7 can be marked "optional, helps us tailor your plan" to reduce friction — but keep Step 8 (contact) required.
 - **Back button** on every step.
 - **Mobile-first:** since your site already leans dev-audience/technical, keep the chat aesthetic consistent with your existing "Live Console" / terminal styling for brand consistency.
 - **Exit-intent save:** if a user abandons after Step 3+, capture partial data (goal + service) and email/soft-nudge them, don't lose the signal.
 - Place the entry point for this either as a **hero-section button** ("Not sure where to start? Try our AI Guide") or as a **persistent chat-bubble launcher**, given you already have a "Not sure where to start?" line in your footer contact CTA.
-

6. Where This Fits on Your Site

You already have two natural landing spots:

1. Replace/augment the **"Not sure where to start?"** line near your contact CTA — perfect entry point, zero new real estate needed.
2. Position it as a lighter-weight **precursor to the Playbook Generator** — questionnaire narrows the service, then hands off into the more detailed automation-specific flow.
